 11 Corporation, NAD Electronics International, NAD Electronics Of America, Onkyo Corporation,
 12 Onkyo USA Corporation, OPPO Digital, Inc., Panasonic Corporation, Panasonic Corporation Of
 13 North America, Pioneer Corporation, Pioneer Electronics (USA) Inc., Samsung Electronics
 14 America, Inc., Samsung Electronics Co., Ltd., Sharp Corporation, Sharp Electronics Corporation,
 15 Toshiba Corporation, Toshiba America Information Systems, Inc., Toshiba America, Inc.,
 16 ViewSonic Corporation, ViewSonic International Corporation, Vizio, Inc., Yamaha Corporation,
 17 Yamaha Corporation Of America, and Yamaha Electronics Corporation, USA (collectively,
 18 "Defendants"), and alleges as follows:

19 NATURE OF THE ACTION AND PARTIES

20 1. This is an action for patent infringement arising under the patent laws of the
 21 United States, Title 35 of the United States Code.

22 2. Plaintiff Orinda is a corporation organized under the laws of California with its
 23 principal place of business at 357 Castro Street, Suite 5, Mountain View, California 94041.

24 3. On information and belief, defendant ASUSTek Computer Inc. ("ASUS") is a
 25 corporation organized under the laws of Taiwan with its principal place of business at No.15, Li-
 26 Te Rd., Peitou District, Taipei 112, Taiwan, R.O.C.

27 4. On information and belief, defendant ASUS Computer International, Inc. ("ASUS
 28 International") is a corporation organized under the laws of California with its principal place of

1 business at 800 Corporate Way, Fremont, California 94539.

2 5. On information and belief, defendant Audio Partnership Plc (“Audio Partnership”)
3 is a corporation organized under the laws of the United Kingdom with its principal place of
4 business at Gallery Court, Hankey Place, London SE1 4BB, United Kingdom.

5 6. On information and belief, defendant Cambridge Audio Ltd. (“Cambridge Audio”)
6 is a limited company organized under the laws of the United Kingdom with its principal place of
7 business at Gallery Court, Hankey Place, London SE1 4BB, United Kingdom.

8 7. Audiovox Corporation (“Audiovox”) is a corporation organized under the laws of
9 Delaware with its principal place of business at 180 Marcus Boulevard, Hauppauge, New York
10 11788.

11 8. On information and belief, defendant Audiovox Electronics Corporation
12 (“Audiovox Electronics”) is a corporation organized under the laws of Delaware with its principal
13 place of business at 180 Marcus Boulevard, Hauppauge, New York 11788.

14 9. On information and belief, defendant Best Buy Co., Inc. (“Best Buy”) is a
15 corporation organized under the laws of Minnesota with its principal place of business at 7601
16 Penn Avenue South, Richfield, Minnesota 55423.

17 10. On information and belief, defendant Best Buy Purchasing, LLC (“Best Buy
18 Purchasing”) is a limited liability company organized under the laws of Minnesota with its
19 principal place of business at 7601 Penn Avenue South, Richfield, Minnesota 55423.

20 11. On information and belief, defendant Dell Inc. (“Dell”) is a corporation organized
21 under the laws of Delaware with its principal place of business at One Dell Way, Round Rock,
22 Texas 78682.

23 12. On information and belief, defendant D&M Holdings Inc. (“D&M”) is a
24 corporation organized under the laws of Japan with its principal place of business at D&M
25 Building 2-1, Nisshin-cho, Kawasaki-ku, Kawasaki-shi, Kanagawa, 210-8569 Japan.

26 13. On information and belief, defendant D&M Holdings US Inc. (“D&M US”) is a
27 corporation organized under the laws of Delaware with its principal place of business at 100
28 Corporate Drive, Mahwah, New Jersey 07430-2041.

1 14. On information and belief, defendant Denon Electronics (USA) LLC ("Denon") is
2 a corporation organized under the laws of Delaware with its principal place of business at 100
3 Corporate Drive, Mahwah, New Jersey 07430-2041.

4 15. On information and belief, defendant Marantz America, Inc. ("Marantz") is a
5 corporation organized under the laws of Delaware with its principal place of business at 100
6 Corporate Drive, Mahwah, New Jersey 07430-2041.

7 16. On information and belief, defendant Funai Corporation, Inc. ("Funai") is a
8 corporation organized under the laws of New Jersey with its principal place of business at 201
9 Route 17 North, Suite 903, Rutherford, New Jersey 07070.

10 17. On information and belief, defendant Funai Electric Co., Ltd. ("Funai Ltd.") is a
11 limited company organized under the laws of Japan with its principal place of business at 7-7-1
12 Nakagaito, Daito city, Osaka 574-0013.

13 18. On information and belief, defendant Harman International Industries, Inc.
14 ("Harman Kardon") is a corporation organized under the laws of Delaware with its principal
15 place of business at 400 Atlantic Street, 15th Floor, Stamford, Connecticut 06901.

16 19. On information and belief, defendant Hewlett-Packard Company ("HP") is a
17 corporation organized under the laws of California with its principal place of business at 3000
18 Hanover Street, Palo Alto, California 94304-1185.

19 20. On information and belief, defendant JVC Kenwood Holdings, Inc. ("JVC
20 Holdings") is a corporation organized under the laws of Japan with its principal place of business
21 at 3-12, Moriyacho, Kanagawa-ku, Yokohama-shi, Kanagawa, 221-0022, Japan.

22 21. On information and belief, defendant Victor Company Of Japan, Ltd. ("JVC") is a
23 limited company organized under the laws of Japan with its principal place of business at 3-12,
24 Moriyacho, Kanagawa-ku, Yokohama-shi, Kanagawa, 221-8528, Japan.

25 22. On information and belief, defendant JVC Americas Corporation ("JVC
26 America") is a corporation organized under the laws of Delaware with its principal place of
27 business at 1700 Valley Rd., Wayne, New Jersey 07470.

28 23. On information and belief, defendant Koninklijke Philips Electronics N.V.

1 (“Philips”) is a company organized under the laws of the Netherlands with its principal place of
2 business at Amstelplein 2, Breitner Center PO Box 77900, Amsterdam, 1070 MX, Netherlands.

3 24. On information and belief, defendant Philips Electronics North America
4 Corporation (“Philips NA”) is a corporation organized under the laws of Delaware with its
5 principal place of business at 3000 Minuteman Rd., Building One, Andover, Massachusetts,
6 01810.

7 25. On information and belief, defendant Lenovo Inc. (“Lenovo”) is a corporation
8 organized under the laws of North Carolina with its principal place of business at 1009 Think
9 Place, Morrisville, North Carolina 27560.

10 26. On information and belief, defendant LG Electronics Inc. (“LG”) is a corporation
11 organized under the laws of South Korea with its principal place of business at LG Twin Towers
12 20, Yoido-dong, Youngdungpo-gu Seoul 150-721, South Korea.

13 27. On information and belief, defendant LG Electronics U.S.A. Inc. (“LG USA”) is a
14 corporation organized under the laws of New Jersey with its principal place of business at 1000
15 Sylvan Avenue, Englewood Cliffs, New Jersey 07632.

16 28. On information and belief, defendant Lite-On IT Corporation (“Lite-On”) is a
17 corporation organized under the laws of Taiwan with its principal place of business at 12F, 392,
18 Ruey Kuang Road, Neihsu, Taipei 114, Taiwan, R.O.C.

19 29. On information and belief, defendant Lite-On IT Americas, Inc. (“Lite-On
20 Americas”) is a corporation organized and existing under the laws of Delaware with its principal
21 place of business at 42000 Christy Street Fremont, California 94538.

22 30. On information and belief, defendant Micro-Star International Company, Ltd.
23 (“Microstar”) is a corporation organized under the laws of Taiwan with its principal place of
24 business at No. 69, Lide St., Zhonghe Dist., New Taipei City 235, Taiwan, R.O.C.

25 31. On information and belief, defendant MSI Computer Corporation (“MSI”) is a
26 corporation organized under the laws of California with its principal place of business at 901
27 Canada Court, City of Industry, California 91748.

28 32. On information and belief, defendant NAD Electronics International (“NAD”) is a

1 corporation organized under the laws of Canada with its principal place of business at 633 Granite
2 Court Pickering, Ontario L1W 3K1 Canada.

3 33. On information and belief, defendant NAD Electronics Of America ("NAD
4 America") is a corporation organized under the laws of Delaware with its principal place of
5 business at 6 Merchant Street, Sharon, Massachusetts 02067.

6 34. On information and belief, defendant Onkyo Corporation ("Onkyo") is a
7 corporation organized under the laws of Japan with its principal place of business at 2-1, Nisshin-
8 cho, Neyagawa-shi, Osaka 572-8540, Japan.

9 35. On information and belief, defendant Onkyo USA Corporation ("Onkyo USA") is
10 a corporation organized under the laws of New Jersey with its principal place of business at 18
11 Park Way, Upper Saddle River, New Jersey 07458.

12 36. On information and belief, defendant OPPO Digital, Inc. ("OPPO") is a
13 corporation organized under the laws of California with its principal place of business at 2629
14 Terminal Blvd., Suite B, Mountain View, California 94043.

15 37. On information and belief, defendant Panasonic Corporation ("Panasonic") is a
16 corporation organized under the laws of Japan with its principal place of business at 1006, Oaza
17 Kadoma, Kadoma-shi, Osaka 571-8501, Japan.

18 38. On information and belief, defendant Panasonic Corporation of North America
19 ("Panasonic NA") is a corporation organized under the laws of New Jersey with its principal
20 place of business at 1 Panasonic Way, Secaucus, New Jersey 07094.

21 39. On information and belief, defendant Pioneer Corporation ("Pioneer") is a
22 corporation organized under the laws of Japan with its principal place of business at 1-1 Shin-
23 ogura, Saiwai-ku, Kawasaki-shi, Kanagawa 212-0031, Japan.

24 40. On information and belief, defendant Pioneer Electronics (USA) Inc. ("Pioneer
25 USA") is a corporation organized under the laws of California with its principal place of business
26 at 2265 E. 220th St., Long Beach, California 90810.

27 41. On information and belief, defendant Samsung Electronics America, Inc. ("SEA")
28 is a corporation organized under the laws of New Jersey with its principal place of business at 85

1 Challenger Road, Ridgefield Park, New Jersey 07660.

2 42. On information and belief, defendant Samsung Electronics Co., Ltd. ("SEC") is a
3 limited company corporation organized under the laws of South Korea with its principal place of
4 business at 1320-10, Seocho 2-dong, Seocho-gu, Seoul 137-857, South Korea.

5 43. On information and belief, defendant Sharp Corporation ("Sharp") is a corporation
6 organized under the laws of Japan with its principal place of business at 22-22 Nagaike-cho,
7 Abeno-ku, Osaka 545-8522, Japan.

8 44. On information and belief, defendant Sharp Electronics Corporation ("Sharp
9 Electronics") is a corporation organized under the laws of New Jersey with its principal place of
10 business at Sharp Plaza, Mahwah, New Jersey 07495-1163.

11 45. On information and belief, defendant Toshiba Corporation ("Toshiba") is a
12 corporation organized under the laws of Japan with its principal place of business at 1-1, Shibaura
13 1-chome, Minato-ku, Tokyo 105-8001, Japan.

14 46. On information and belief, defendant Toshiba America Information Systems, Inc.
15 ("TAIS") is a corporation organized under the laws of California with its principal place of
16 business at 9740 Irvine Boulevard, Irvine, California, 92718-1697.

17 47. On information and belief, defendant Toshiba America, Inc. ("Toshiba America")
18 is a corporation organized under the laws of New York with its principal place of business at
19 1251 Avenue of the Americas, Suite 4110, New York, New York 10020.

20 48. On information and belief, defendant ViewSonic Corporation ("ViewSonic") is a
21 corporation organized under the laws of Delaware with its principal place of business at 381 Brea
22 Canyon Road, Walnut, California 91789.

23 49. On information and belief, defendant ViewSonic International Corporation
24 ("ViewSonic International") is a corporation organized under the laws of Taiwan with its
25 principal place of business at 9F, No. 192, Lien Chen Road, Chung Ho, 235 Taipei, Taiwan,
26 R.O.C.

27 50. On information and belief, defendant Vizio, Inc. ("Vizio") is a corporation
28 organized under the laws of California with its principal place of business at 39 Tesla, Irvine,

1 California 92618.

2 51. On information and belief, defendant Yamaha Corporation ("Yamaha") is a
3 corporation organized under the laws of Japan with its principal place of business at 10-1,
4 Nakazawa-cho, Naka-ku, Hamamatsu, Shizuoka 430-8650, Japan.

5 52. On information and belief, defendant Yamaha Corporation of America ("Yamaha
6 America") is a corporation organized under the laws of California with its principal place of
7 business at 6000 Orangethorpe Avenue, Buena Park, California 90620.

8 53. On information and belief, defendant Yamaha Electronics Corporation, USA
9 ("Yamaha USA") is a corporation organized under the laws of California with its principal place
10 of business at 6000 Orangethorpe Avenue, Buena Park, California 90620.

11 JURISDICTION

12 54. This court has subject matter jurisdiction over this action pursuant to 35 U.S.C. §
13 271 et seq., 28 U.S.C. §§ 1331 and 1338(a). Defendants are subject to personal jurisdiction in
14 this district because each Defendant has conducted and does conduct business within the State of
15 California. Each Defendant, directly or through intermediaries (including distributors, retailers,
16 and others), ships, distributes, offers for sale, sells, and advertises (including the provision of an
17 interactive web page) its products in the United States, the State of California, and the Northern
18 District of California. Upon information and belief, each Defendant has purposefully and
19 voluntarily placed one or more of its infringing products, as described below, into the stream of
20 commerce with the expectation that they will be purchased by consumers in the Northern District
21 of California. Upon information and belief, these infringing products have been and continue to
22 be purchased by consumers in the Northern District of California. Each Defendant has committed
23 the tort of patent infringement within the State of California and, more particularly, within the
24 Northern District of California.

25 VENUE

26 55. Venue is proper in this district pursuant to 28 U.S.C. §§ 1391(b), 1391(c) and 1391
27 (d) and 28 U.S.C. § 1400(b). Defendants reside in this district because they are subject to
28 personal jurisdiction in this district.

INTRADISTRICT ASSIGNMENT

56. Because this is an Intellectual Property Action as specified in Civil L.R. 3-2(c), it is to be assigned on a district-wide basis.

FIRST CLAIM FOR RELIEF

(Infringement of United States Patent No. 5,438,560)

57. Orinda holds all right, title and interest in United States Patent No. 5,438,560 ("the '560 patent"). The '560 patent is entitled "Apparatus and Method for Recording/Reproducing Optical Information and Optical Disk-Shaped Recording Medium." The application resulting in the '560 patent was filed on October 21, 1993, and the United States Patent and Trademark Office duly and legally issued the '560 patent on August 1, 1995. A copy of the '560 patent is attached hereto as Exhibit A.

58. The '560 patent generally claims methods for recording and reproducing optical information using optical discs, such as Blu-ray discs. Products that include drives that play or record Blu-ray discs practice one or more claims of the '560 patent when those products are used.

59. ASUS and ASUS International make or have made, use, offer to sell, sell, distribute, supply, provide and/or import into the United States products that include Blu-ray drives, including but not limited to laptop computer models G73SW and G73JW ("the ASUS Accused Products"). ASUS and ASUS International directly infringe the '560 patent by, among other activities, operating the Blu-ray drive in the ASUS Accused Products. ASUS and ASUS International are also indirectly liable for the direct infringement of the '560 patent by others. Consumers and other users of the Blu-ray drive in the ASUS Accused Products directly infringe the '560 patent when they operate the Blu-ray drive in the ASUS Accused Products for personal use or otherwise. ASUS and ASUS International induce such end-users' direct infringement because ASUS and ASUS International, with knowledge of the '560 patent, knowingly and intentionally encourage the end-users to operate the Blu-ray drives in the ASUS Accused Products by, among other means, providing instructions for the use of the ASUS Accused Products, providing technical support to such end users, and advertising the ASUS Accused Products for use in an infringing manner. ASUS and ASUS International contribute to end-users'

1 infringement of the '560 patent by offering for sale, selling, importing into the United States,
2 distributing, supplying, and/or otherwise providing the ASUS Accused Products for use by end-
3 users with knowledge that the Blu-ray drives in the ASUS Accused Products are designed for use
4 in a manner that practices the inventions claimed in the '560 patent, and that the Blu-ray drives in
5 the ASUS Accused Products do not have substantial non-infringing uses.

6 60. Defendant Audio Partnership and Cambridge Audio make or have made, use, offer
7 to sell, sell, distribute, supply, provide and/or import into the United States products that include
8 Blu-ray drives, including but not limited to Blu-ray players sold under the Cambridge Audio
9 brand, such as models Azur 751BD and Azur 650BD sold (collectively, "the Cambridge Audio
10 Accused Products"). Audio Partnership and Cambridge Audio directly infringe the '560 patent
11 by, among other activities, operating the Blu-ray drive in the Cambridge Audio Accused
12 Products. Audio Partnership and Cambridge Audio are also indirectly liable for the direct
13 infringement of the '560 patent by others. Consumers and other users of the Blu-ray drive in the
14 Cambridge Audio Accused Products directly infringe the '560 patent when they operate the Blu-
15 ray drive in the Cambridge Audio Accused Products for personal use or otherwise. Audio
16 Partnership and Cambridge Audio induce such end-users' direct infringement because Audio
17 Partnership and Cambridge Audio, with knowledge of the '560 patent, knowingly and
18 intentionally encourage the end-users to operate the Blu-ray drives in the Cambridge Audio
19 Accused Products by, among other means, providing instructions for the use of the Cambridge
20 Audio Accused Products, providing technical support to such end users, and advertising the
21 Cambridge Audio Accused Products for use in an infringing manner. Audio Partnership and
22 Cambridge Audio contribute to end-users' infringement of the '560 patent by offering for sale,
23 selling, importing into the United States, distributing, supplying, and/or otherwise providing the
24 Cambridge Accused Products for use by end-users with knowledge that the Blu-ray drives in the
25 Cambridge Audio Accused Products are designed for use in a manner that practices the
26 inventions claimed in the '560 patent, and that the Blu-ray drives in the Cambridge Audio
27 Accused Products do not have substantial non-infringing uses.

28 61. Defendants Audiovox and Audiovox Electronics make or have made, use, offer to

1 sell, sell, distribute, supply, provide and/or import into the United States products that include
2 Blu-ray drives, including but not limited to Blu-ray players sold under the RCA® brand, such as
3 home theater model RTB1023 and Blu-ray player models BRC11082 and BRC3108 (collectively,
4 “the Audiovox Accused Products”). Audiovox and Audiovox Electronics directly infringe the
5 ’560 patent by, among other activities, operating the Blu-ray drive in the Audiovox Accused
6 Products. Audiovox and Audiovox Electronics are also indirectly liable for the direct
7 infringement of the ’560 patent by others. Consumers and other users of the Blu-ray drive in the
8 Audiovox Accused Products directly infringe the ’560 patent when they operate the Blu-ray drive
9 in the Audiovox Accused Products for personal use or otherwise. Audiovox and Audiovox
10 Electronics induce such end-users’ direct infringement because Audiovox and Audiovox
11 Electronics, with knowledge of the ’560 patent, knowingly and intentionally encourage end-users
12 to operate the Blu-ray drives in the Audiovox Accused Products by, among other means,
13 providing instructions for the use of the Audiovox Accused Products, providing technical support
14 to such end users, and advertising the Audiovox Accused Products for use in an infringing
15 manner. Audiovox and Audiovox Electronics contribute to end-users’ infringement of the ’560
16 patent by offering for sale, selling, importing into the United States, distributing, supplying,
17 and/or otherwise providing the Audiovox Accused Products for use by end-users with knowledge
18 that the Blu-ray drives in the Audiovox Accused Products are designed for use in a manner that
19 practices the inventions claimed in the ’560 patent, and that the Blu-ray drives in the Audiovox
20 Accused Products do not have substantial non-infringing uses.

21 62. Defendants Best Buy and Best Buy Purchasing make or have made, use, offer to
22 sell, sell, distribute, supply, provide and/or import into the United States products that include
23 Blu-ray drives, including but not limited to Blu-ray players sold under the Insignia® brand, such
24 as models NS-WBRDVD2 and NS-BRDVD4 (collectively, “the Best Buy Accused Products”).
25 Best Buy and Best Buy Purchasing directly infringe the ’560 patent by, among other activities,
26 operating the Blu-ray drive in the Best Buy Accused Products. Best Buy and Best Buy
27 Purchasing are also indirectly liable for the direct infringement of the ’560 patent by others.
28 Consumers and other users of the Blu-ray drive in the Best Buy Accused Products directly

1 infringe the '560 patent when they operate the Blu-ray drive in the Best Buy Accused Products
2 for personal use or otherwise. Best Buy and Best Buy Purchasing induce such end-users' direct
3 infringement because Best Buy and Best Buy Purchasing, with knowledge of the '560 patent,
4 knowingly and intentionally encourage end-users to operate the Blu-ray drives in the Best Buy
5 Accused Products by, among other means, providing instructions for the use of the Best Buy
6 Accused Products, providing technical support to such end users, and advertising the Best Buy
7 Accused Products for use in an infringing manner. Best Buy and Best Buy Purchasing contribute
8 to end-users' infringement of the '560 patent by offering for sale, selling, importing into the
9 United States, distributing, supplying, and/or otherwise providing the Best Buy Accused Products
10 for use by end-users with knowledge that the Blu-ray drives in the Best Buy Accused Products
11 are designed for use in a manner that practices the inventions claimed in the '560 patent, and that
12 the Blu-ray drives in the Best Buy Accused Products do not have substantial non-infringing uses.

13 63. Defendant Dell makes or has made, uses, offers to sell, sells, distributes, supplies,
14 provides and/or imports into the United States products that include Blu-ray drives, including but
15 not limited to laptop computer models Inspiron 14R, Inspiron 15R, Inspiron 17R, XPS 15 and
16 XPS 17 (collectively, "the Dell Accused Products"). Dell directly infringes the '560 patent by,
17 among other activities, operating the Blu-ray drive in the Dell Accused Products. Dell is also
18 indirectly liable for the direct infringement of the '560 patent by others. Consumers and other
19 users of the Blu-ray drive in the Dell Accused Products directly infringe the '560 patent when
20 they operate the Blu-ray drive in the Dell Accused Products for personal use or otherwise. Dell
21 induces such end-users' direct infringement because Dell, with knowledge of the '560 patent,
22 knowingly and intentionally encourages end-users to operate the Blu-ray drives in the Dell
23 Accused Products by, among other means, providing instructions for use of the Dell Accused
24 Products, providing technical support to such end users, and advertising the Dell Accused
25 Products for use in an infringing manner. Dell contributes to end-users' infringement of the '560
26 patent by offering for sale, selling, importing into the United States, distributing, supplying,
27 and/or otherwise providing the Dell Accused Products for use by end-users with knowledge that
28 the Blu-ray drives in the Dell Accused Products are designed for use in a manner that practices

1 the inventions claimed in the '560 patent, and that the Blu-ray drives in the Dell Accused
2 Products do not have substantial non-infringing uses.

3 64. Defendants D&M, D&M US, Denon, and Marantz make or have made, use, offer
4 to sell, sell, distribute, supply, provide and/or import into the United States products that include
5 Blu-ray drives, including but not limited to Blu-ray player models DBP-1610, DBP-1611UD,
6 DBP-2010CI, DBP-2012UDCI, DBP-4010UDCI, DVD-A1UDCI, and S-5BD, sold under the
7 Denon brand, and UD5005, UD7006, UD8004, and UD9004, sold under the Marantz brand
8 (collectively, "the D&M Accused Products"). Defendants D&M, D&M US, Denon, and Marantz
9 directly infringe the '560 patent by, among other activities, operating the Blu-ray drive in the
10 D&M Accused Products. Defendants D&M, D&M US, Denon, and Marantz are also indirectly
11 liable for the direct infringement of the '560 patent by others. Consumers and other users of the
12 Blu-ray drive in the D&M Accused Products directly infringe the '560 patent when they operate
13 the Blu-ray drive in the D&M Accused Products for personal use or otherwise. Defendants
14 D&M, D&M US, Denon, and Marantz induce such end-users' direct infringement because
15 Defendants D&M, D&M US, Denon, and Marantz, with knowledge of the '560 patent,
16 knowingly and intentionally encourage end-users to operate the Blu-ray drives in the D&M
17 Accused Products by, among other means, providing instructions for use of the D&M Accused
18 Products, providing technical support to such end users, and advertising the D&M Accused
19 Products for use in an infringing manner. Defendants D&M, D&M US, Denon, and Marantz
20 contribute to end-users' infringement of the '560 patent by offering for sale, selling, importing
21 into the United States, distributing, supplying, and/or otherwise providing the D&M Accused
22 Products for use by end-users with knowledge that the Blu-ray drives in the D&M Accused
23 Products are designed for use in a manner that practices the inventions claimed in the '560 patent,
24 and that the Blu-ray drives in the D&M Accused Products do not have substantial non-infringing
25 uses.

26 65. Defendants Funai and Funai Ltd. make or have made, use, offer to sell, sell,
27 distribute, supply, provide and/or import into the United States products that include Blu-ray
28 drives, including but not limited to Blu-ray home theater system models MRD410B, Blu-ray disc

1 player models NB500MG1F and NB530MGX, and Blu-ray combination television models
2 42MD459B, which are sold under the Magnavox brand, and Blu-ray combination television
3 models LD427SSX and Blu-ray disc player models NB530SLX and NB620SL1, which are sold
4 under the Sylvania brand (collectively, "the Funai Accused Products"). Funai and Funai Ltd.
5 directly infringe the '560 patent by, among other activities, operating the Blu-ray drive in the
6 Funai Accused Products. Funai and Funai Ltd. are also indirectly liable for the direct
7 infringement of the '560 patent by others. Consumers and other users of the Blu-ray drive in the
8 Funai Accused Products directly infringe the '560 patent when they operate the Blu-ray drive in
9 the Funai Accused Products for personal use or otherwise. Funai and Funai Ltd. induce such end-
10 users' direct infringement because Funai and Funai Ltd., with knowledge of the '560 patent,
11 knowingly and intentionally encourage end-users to operate the Blu-ray drives in the Funai
12 Accused Products by, among other means, providing instructions for use of the Funai Accused
13 Products, providing technical support to such end users, and advertising the Funai Accused
14 Products for use in an infringing manner. Funai and Funai Ltd. contribute to end-users'
15 infringement of the '560 patent by offering for sale, selling, importing into the United States,
16 distributing, supplying, and/or otherwise providing the Funai Accused Products for use by end-
17 users with knowledge that the Blu-ray drives in the Funai Accused Products are designed for use
18 in a manner that practices the inventions claimed in the '560 patent, and that the Blu-ray drives in
19 the Funai Accused Products do not have substantial non-infringing uses.

20 66. Defendant Harman Kardon makes, uses, offers to sell, sells, distributes, supplies,
21 provides, and/or imports into the United States products that include Blu-ray drives, including but
22 not limited to Blu-ray player models BDS 2 SO/120, BDS 5 SO/120, which are sold under the
23 "Harman/Kardon" brand, and BD 30, which is sold under the "Lexicon" brand (collectively, "the
24 Harman Kardon Accused Products"). Harman Kardon directly infringes the '560 patent by,
25 among other activities, operating the Blu-ray drive in the Harman Kardon Accused Products.
26 Harman Kardon is also indirectly liable for the direct infringement of the '560 patent by others.
27 Consumers and other users of the Blu-ray drive in the Harman Kardon Accused Products directly
28 infringe the '560 patent when they operate the Blu-ray drive in the Harman Kardon Accused

1 Products for personal use or otherwise. Harman Kardon induces such end-users' direct
 2 infringement because Harman Kardon, with knowledge of the '560 patent, knowingly and
 3 intentionally encourages end-users to operate the Blu-ray drives in the Harman Kardon Accused
 4 Products by, among other means, providing instructions for use of the Harman Kardon Accused
 5 Products, providing technical support to such end users, and advertising the Harman Kardon
 6 Accused Products for use in an infringing manner. Harman Kardon contributes to end-users'
 7 infringement of the '560 patent by offering for sale, selling, importing into the United States,
 8 distributing, supplying, and/or otherwise providing the Harman Kardon Accused Products for use
 9 by end-users with knowledge that the Blu-ray drives in the Harman Kardon Accused Products are
 10 designed for use in a manner that practices the inventions claimed in the '560 patent, and that the
 11 Blu-ray drives in the Harman Kardon Accused Products do not have substantial non-infringing
 12 uses.

13 67. Defendant HP makes, uses, offers to sell, sells, distributes, supplies, provides,
 14 and/or imports into the United States products that include Blu-ray drives, including but not
 15 limited to computer models HP Pavilion dv7t Select Edition, HP Pavilion dv6t Select Edition, HP
 16 Pavilion Elite HPE-390t, HP Pavilion Elite HPE-380t, HP Pavilion Elite HPE-360z, HP Pavilion
 17 Elite HPE-350t PC, HP Pavilion Elite HPE-310t, HP Pavilion Slimline s5580t, HP Pavilion
 18 p6580t, HP Pavilion Elite HPE-300z, HP Pavilion Slimline s5570t, HP Pavilion p6570t, HP
 19 Pavilion Slimline s5550z, HP Pavilion Slimline s5510t, HP Pavilion p6510t, HP Pavilion
 20 Slimline s5500z, HP Pavilion p6500z, and HP Pavilion p6550z, and optical disc drive model
 21 number HP bd240i Internal SATA Blu-ray Combo Drive (collectively, "the HP Accused
 22 Products"). HP directly infringes the '560 patent by, among other activities, operating the Blu-
 23 ray drive in the HP Accused Products. HP is also indirectly liable for the direct infringement of
 24 the '560 patent by others. Consumers and other users of the Blu-ray drive in the HP Accused
 25 Products directly infringe the '560 patent when they operate the Blu-ray drive in the HP Accused
 26 Products for personal use or otherwise. HP induces such end-users' direct infringement because
 27 HP, with knowledge of the '560 patent, knowingly and intentionally encourages end-users to
 28 operate the Blu-ray drives in the HP Accused Products by, among other means, providing

1 instructions for use of the HP Accused Products, providing technical support to such end users,
2 and advertising the HP Accused Products for use in an infringing manner. HP contributes to end-
3 users' infringement of the '560 patent by offering for sale, selling, importing into the United
4 States, distributing, supplying, and/or otherwise providing the HP Accused Products for use by
5 end-users with knowledge that the Blu-ray drives in the HP Accused Products are designed for
6 use in a manner that practices the inventions claimed in the '560 patent, and that the Blu-ray
7 drives in the HP Accused Products do not have substantial non-infringing uses.

8 68. Defendants JVC Holdings, JVC, and JVC Americas make or have made, use, offer
9 to sell, sell, distribute, supply, provide and/or import into the United States products that include
10 Blu-ray drives, including but not limited to Blu-ray player models XV-BP11 and XV-BP1
11 (collectively, "the JVC Accused Products"). JVC Holdings, JVC, and JVC Americas directly
12 infringe the '560 patent by, among other activities, operating the Blu-ray drive in the JVC
13 Accused Products. JVC Holdings, JVC, and JVC Americas are also indirectly liable for the direct
14 infringement of the '560 patent by others. Consumers and other users of the Blu-ray drive in the
15 JVC Accused Products directly infringe the '560 patent when they operate the Blu-ray drive in
16 the JVC Accused Products for personal use or otherwise. JVC Holdings, JVC, and JVC
17 Americas induce such end-users' direct infringement because JVC Holdings, JVC, and JVC
18 Americas, with knowledge of the '560 patent, knowingly and intentionally encourage end-users
19 to operate the Blu-ray drives in the JVC Accused Products by, among other means, providing
20 instructions for use of the JVC Accused Products, providing technical support to such end users,
21 and advertising the JVC Accused Products for use in an infringing manner. JVC Holdings, JVC,
22 and JVC Americas contribute to end-users' infringement of the '560 patent by offering for sale,
23 selling, importing into the United States, distributing, supplying, and/or otherwise providing the
24 JVC Accused Products for use by end-users with knowledge that the Blu-ray drives in the JVC
25 Accused Products are designed for use in a manner that practices the inventions claimed in the
26 '560 patent, and that the Blu-ray drives in the JVC Accused Products do not have substantial non-
27 infringing uses.

28 69. Defendant Lenovo makes or has made, uses, offers to sell, sells, distributes,

1 supplies, provides and/or imports into the United States products that include Blu-ray drives,
2 including but not limited to optical disc drive models 45K1675 and 43R9150, and computer
3 models K300 and K320 (collectively, "the Lenovo Accused Products"). Lenovo directly
4 infringes the '560 patent by, among other activities, operating the Blu-ray drive in the Lenovo
5 Accused Products. Lenovo is also indirectly liable for the direct infringement of the '560 patent
6 by others. Consumers and other users of the Blu-ray drive in the Lenovo Accused Products
7 directly infringe the '560 patent when they operate the Blu-ray drive in the Lenovo Accused
8 Products for personal use or otherwise. Lenovo induces such end-users' direct infringement
9 because Lenovo, with knowledge of the '560 patent, knowingly and intentionally encourages end-
10 users to operate the Blu-ray drives in the Lenovo Accused Products by, among other means,
11 providing instructions for use of the Lenovo Accused Products, providing technical support to
12 such end users, and advertising the Lenovo Accused Products for use in an infringing manner.
13 Lenovo contributes to end-users' infringement of the '560 patent by offering for sale, selling,
14 importing into the United States, distributing, supplying, and/or otherwise providing the Lenovo
15 Accused Products for use by end-users with knowledge that the Blu-ray drives in the Lenovo
16 Accused Products are designed for use in a manner that practices the inventions claimed in the
17 '560 patent, and that the Blu-ray drives in the Lenovo Accused Products do not have substantial
18 non-infringing uses.

19 70. Defendant LG and LG USA make or have made, use, offer to sell, sell, distribute,
20 supply, provide, and/or import into the United States products that include Blu-ray drives,
21 including but not limited to Blu-ray disc player models BD690, BD670, BD640, BD630, BX580,
22 BD590, BD570 and BD550, home theater system models LHB975, LHB535 and LHB335, Blu-
23 ray disc drive model BP06LU10, and storage device model N2B1DD1 (collectively, "the LG
24 Accused Products"). LG and LG USA directly infringe the '560 patent by, among other
25 activities, operating the Blu-ray drive in the LG Accused Products. LG and LG USA are also
26 indirectly liable for the direct infringement of the '560 patent by others. Consumers and other
27 users of the Blu-ray drive in the LG Accused Products directly infringe the '560 patent when they
28 operate the Blu-ray drive in the LG Accused Products for personal use or otherwise. LG and LG

1 USA induce such end-users' direct infringement because LG and LG USA, with knowledge of
2 the '560 patent, knowingly and intentionally encourage end-users to operate the Blu-ray drives in
3 the LG Accused Products by, among other means, providing instructions for use of the LG
4 Accused Products, providing technical support to such end users, and advertising the LG Accused
5 Products for use in an infringing manner. LG and LG USA contribute to end-users' infringement
6 of the '560 patent by offering for sale, selling, importing into the United States, distributing,
7 supplying, and/or otherwise providing the LG Accused Products for use by end-users with
8 knowledge that the Blu-ray drives in the LG Accused Products are designed for use in a manner
9 that practices the inventions claimed in the '560 patent, and that the Blu-ray drives in the LG
10 Accused Products do not have substantial non-infringing uses.

11 71. Defendants Lite-On and Lite-On Americas make, use, offer to sell, sell, distribute,
12 supply, provide, and/or import into the United States products that include Blu-ray drives,
13 including but not limited to internal Blu-ray writers iHBS212-08 and iHBS112-29, and Blu-ray
14 combo drives IHES208-08 and iHES108-29 (collectively, "the Lite-On Accused Products").
15 Lite-On and Lite-On Americas directly infringe the '560 patent by, among other activities,
16 operating the Blu-ray drive in the Lite-On Accused Products. Lite-On and Lite-On Americas are
17 also indirectly liable for the direct infringement of the '560 patent by others. Consumers and
18 other users of the Blu-ray drive in the Lite-On Accused Products directly infringe the '560 patent
19 when they operate the Blu-ray drive in the Lite-On Accused Products for personal use or
20 otherwise. Lite-On and Lite-On Americas induce such end-users' direct infringement because
21 Lite-On and Lite-On Americas, with knowledge of the '560 patent, knowingly and intentionally
22 encourage end-users to operate the Blu-ray drives in the Lite-On Accused Products by, among
23 other means, providing instructions for use of the Lite-On Accused Products, providing technical
24 support to such end users, and advertising the Lite-On Accused Products for use in an infringing
25 manner. Lite-On and Lite-On Americas contribute to end-users' infringement of the '560 patent
26 by offering for sale, selling, importing into the United States, distributing, supplying, and/or
27 otherwise providing the Lite-On Accused Products for use by end-users with knowledge that the
28 Blu-ray drives in the Lite-On Accused Products are designed for use in a manner that practices

1 the inventions claimed in the '560 patent, and that the Blu-ray drives in the Lite-On Accused
2 Products do not have substantial non-infringing uses.

3 72. Defendants Microstar and MSI make, use, offer to sell, sell, distribute, supply,
4 provide, and/or import into the United States products that include Blu-ray drives, including but
5 not limited to desktop computer model AE2420 3D-046US and notebook computer model
6 FX700-056US (collectively, "the Microstar Accused Products"). Microstar and MSI directly
7 infringe the '560 patent by, among other activities, operating the Blu-ray drive in the Microstar
8 Accused Products. Microstar and MSI are also indirectly liable for the direct infringement of the
9 '560 patent by others. Consumers and other users of the Blu-ray drive in the Microstar Accused
10 Products directly infringe the '560 patent when they operate the Blu-ray drive in the Microstar
11 Accused Products for personal use or otherwise. Microstar and MSI induce such end-users'
12 direct infringement because Microstar and MSI, with knowledge of the '560 patent, knowingly
13 and intentionally encourage end-users to operate the Blu-ray drives in the Microstar Accused
14 Products by, among other means, providing instructions for use of the Microstar Accused
15 Products, providing technical support to such end users, and advertising the Microstar Accused
16 Products for use in an infringing manner. Microstar and MSI contribute to end-users'
17 infringement of the '560 patent by offering for sale, selling, importing into the United States,
18 distributing, supplying, and/or otherwise providing the Microstar Accused Products for use by
19 end-users with knowledge that the Blu-ray drives in the Microstar Accused Products are designed
20 for use in a manner that practices the inventions claimed in the '560 patent, and that the Blu-ray
21 drives in the Microstar Accused Products do not have substantial non-infringing uses.

22 73. Defendants NAD and NAD America make, use, offer to sell, sell, distribute,
23 supply, provide, and/or import into the United States products that include Blu-ray drives,
24 including but not limited to Blu-ray disc player models T-587, T-577, T557 and M56
25 (collectively, "the NAD Accused Products"). NAD and NAD America directly infringe the '560
26 patent by, among other activities, operating the Blu-ray drive in the NAD Accused Products.
27 NAD and NAD America are also indirectly liable for the direct infringement of the '560 patent by
28 others. Consumers and other users of the Blu-ray drive in the NAD Accused Products directly

1 infringe the '560 patent when they operate the Blu-ray drive in the NAD Accused Products for
2 personal use or otherwise. NAD and NAD America induce such end-users' direct infringement
3 because NAD and NAD America, with knowledge of the '560 patent, knowingly and
4 intentionally encourage end-users to operate the Blu-ray drives in the NAD Accused Products by,
5 among other means, providing instructions for use of the NAD Accused Products, providing
6 technical support to such end users, and advertising the NAD Accused Products for use in an
7 infringing manner. NAD and NAD America contribute to end-users' infringement of the '560
8 patent by offering for sale, selling, importing into the United States, distributing, supplying,
9 and/or otherwise providing the NAD Accused Products for use by end-users with knowledge that
10 the Blu-ray drives in the NAD Accused Products are designed for use in a manner that practices
11 the inventions claimed in the '560 patent, and that the Blu-ray drives in the NAD Accused
12 Products do not have substantial non-infringing uses.

13 74. Defendants Onkyo and Onkyo USA make, use, offer to sell, sell, distribute,
14 supply, provide, and/or import into the United States products that include Blu-ray drives,
15 including but not limited to Blu-ray disc player models BD-SP308, BD-SP807, BD-SP808, and
16 DV-BD606 (collectively, "the Onkyo Accused Products"). Onkyo and Onkyo USA directly
17 infringe the '560 patent by, among other activities, operating the Blu-ray drive in the Onkyo
18 Accused Products. Onkyo and Onkyo USA are also indirectly liable for the direct infringement
19 of the '560 patent by others. Consumers and other users of the Blu-ray drive in the Onkyo
20 Accused Products directly infringe the '560 patent when they operate the Blu-ray drive in the
21 Onkyo Accused Products for personal use or otherwise. Onkyo and Onkyo USA induce such
22 end-users' direct infringement because Onkyo and Onkyo USA, with knowledge of the '560
23 patent, knowingly and intentionally encourage end-users to operate the Blu-ray drives in the
24 Onkyo Accused Products by, among other means, providing instructions for use of the Onkyo
25 Accused Products, providing technical support to such end users, and advertising the Onkyo
26 Accused Products for use in an infringing manner. Onkyo and Onkyo USA contribute to end-
27 users' infringement of the '560 patent by offering for sale, selling, importing into the United
28 States, distributing, supplying, and/or otherwise providing the Onkyo Accused Products for use

1 by end-users with knowledge that the Blu-ray drives in the Onkyo Accused Products are designed
2 for use in a manner that practices the inventions claimed in the '560 patent, and that the Blu-ray
3 drives in the Onkyo Accused Products do not have substantial non-infringing uses.

4 75. Defendant OPPO makes or has made, uses, offers to sell, sells, distributes,
5 supplies, provides and/or imports into the United States products that include Blu-ray drives,
6 including but not limited to Blu-ray player models BDP-83, BDP-93, and BDP-95 (collectively,
7 "the OPPO Accused Products"). OPPO directly infringes the '560 patent by, among other
8 activities, operating the Blu-ray drive in the OPPO Accused Products. OPPO is also indirectly
9 liable for the direct infringement of the '560 patent by others. Consumers and other users of the
10 Blu-ray drive in the OPPO Accused Products directly infringe the '560 patent when they operate
11 the Blu-ray drive in the OPPO Accused Products for personal use or otherwise. OPPO induces
12 such end-users' direct infringement because OPPO, with knowledge of the '560 patent,
13 knowingly and intentionally encourages end-users to operate the Blu-ray drives in the OPPO
14 Accused Products by, among other means, providing instructions for use of the OPPO Accused
15 Products, providing technical support to such end users, and advertising the OPPO Accused
16 Products for use in an infringing manner. OPPO contributes to end-users' infringement of the
17 '560 patent by offering for sale, selling, importing into the United States, distributing, supplying,
18 and/or otherwise providing the OPPO Accused Products for use by end-users with knowledge that
19 the Blu-ray drives in the OPPO Accused Products are designed for use in a manner that practices
20 the inventions claimed in the '560 patent, and that the Blu-ray drives in the OPPO Accused
21 Products do not have substantial non-infringing uses.

22 76. Defendants Panasonic and Panasonic NA make, use, offer to sell, sell, distribute,
23 supply, provide, and/or import into the United States products that include Blu-ray drives,
24 including but not limited to Blu-ray disc player models DMP-BD35K, DMP-BD55K, DMP-
25 BD60K, DMP-BD70VK, DMP-BD80K, DMP-BD605K, DMP-BD601K, DMP-BD65K, DMP-
26 BD655K, DMP-BD85K, DMP-BD45, DMP-BDT350 and DMP-BDT300, portable Blu-ray disc
27 player models DMP-B15K, DMP-B100 and DMP-B500, and Blu-ray disc home theater system
28 models SC-BT100, SC-BT200, SC-BT300, SC-BT203, SC-BT303, SC-BT730, SC-BT330, SC-

1 BT230, SC-BT235 and SC-BT228 (collectively, "the Panasonic Accused Products"). Panasonic
2 and Panasonic NA directly infringe the '560 patent by, among other activities, operating the Blu-
3 ray drive in the Panasonic Accused Products. Panasonic and Panasonic NA are also indirectly
4 liable for the direct infringement of the '560 patent by others. Consumers and other users of the
5 Blu-ray drive in the Panasonic Accused Products directly infringe the '560 patent when they
6 operate the Blu-ray drive in the Panasonic Accused Products for personal use or otherwise.
7 Panasonic and Panasonic NA induce such end-users' direct infringement because Panasonic and
8 Panasonic NA, with knowledge of the '560 patent, knowingly and intentionally encourage end-
9 users to operate the Blu-ray drives in the Panasonic Accused Products by, among other means,
10 providing instructions for use of the Panasonic Accused Products, providing technical support to
11 such end users, and advertising the Panasonic Accused Products for use in an infringing manner.
12 Panasonic and Panasonic NA contribute to end-users' infringement of the '560 patent by offering
13 for sale, selling, importing into the United States, distributing, supplying, and/or otherwise
14 providing the Panasonic Accused Products for use by end-users with knowledge that the Blu-ray
15 drives in the Panasonic Accused Products are designed for use in a manner that practices the
16 inventions claimed in the '560 patent, and that the Blu-ray drives in the Panasonic Accused
17 Products do not have substantial non-infringing uses.

18 77. Defendants Philips and Philips NA make or have made, use, offer to sell, sell,
19 distribute, supply, provide, and/or import into the United States products that include Blu-ray
20 drives, including but not limited to Blu-ray disc player models BDP3020/F7 and BDP7320/F7,
21 home theater system model HTS3251B/F7 and portable Blu-ray player model PB9011/37
22 (collectively, "the Philips Accused Products"). Philips and Philips NA directly infringe the '560
23 patent by, among other activities, operating the Blu-ray drive in the Philips Accused Products.
24 Philips and Philips NA are also indirectly liable for the direct infringement of the '560 patent by
25 others. Consumers and other users of the Blu-ray drive in the Philips Accused Products directly
26 infringe the '560 patent when they operate the Blu-ray drive in the Philips Accused Products for
27 personal use or otherwise. Philips and Philips NA induce such end-users' direct infringement
28 because Philips and Philips NA, with knowledge of the '560 patent, knowingly and intentionally

1 encourage end-users to operate the Blu-ray drives in the Philips Accused Products by, among
2 other means, providing instructions for use of the Philips Accused Products, providing technical
3 support to such end users, and advertising the Philips Accused Products for use in an infringing
4 manner. Philips and Philips NA contribute to end-users' infringement of the '560 patent by
5 offering for sale, selling, importing into the United States, distributing, supplying, and/or
6 otherwise providing the Philips Accused Products for use by end-users with knowledge that the
7 Blu-ray drives in the Philips Accused Products are designed for use in a manner that practices the
8 inventions claimed in the '560 patent, and that the Blu-ray drives in the Philips Accused Products
9 do not have substantial non-infringing uses.

10 78. Defendants Pioneer and Pioneer USA make or have made, use, offer to sell, sell,
11 distribute, supply, provide, and/or import into the United States products that include Blu-ray
12 drives, including but not limited to Blu-ray disc player models BDP-09FD, BDP-23FD, BDP-
13 05FD, BDP-320, BDP-120 and BDP-51FD, and Blu-ray disc drive models BDR-2205 and BDR-
14 205 (collectively, "the Pioneer Accused Products"). Pioneer and Pioneer USA directly infringe
15 the '560 patent by, among other activities, operating the Blu-ray drive in the Pioneer Accused
16 Products. Pioneer and Pioneer USA are also indirectly liable for the direct infringement of the
17 '560 patent by others. Consumers and other users of the Blu-ray drive in the Pioneer Accused
18 Products directly infringe the '560 patent when they operate the Blu-ray drive in the Pioneer
19 Accused Products for personal use or otherwise. Pioneer and Pioneer USA induce such end-
20 users' direct infringement because Pioneer and Pioneer USA, with knowledge of the '560 patent,
21 knowingly and intentionally encourage end-users to operate the Blu-ray drives in the Pioneer
22 Accused Products by, among other means, providing instructions for use of the Pioneer Accused
23 Products, providing technical support to such end users, and advertising the Pioneer Accused
24 Products for use in an infringing manner. Pioneer and Pioneer USA contribute to end-users'
25 infringement of the '560 patent by offering for sale, selling, importing into the United States,
26 distributing, supplying, and/or otherwise providing the Pioneer Accused Products for use by end-
27 users with knowledge that the Blu-ray drives in the Pioneer Accused Products are designed for
28 use in a manner that practices the inventions claimed in the '560 patent, and that the Blu-ray

1 drives in the Pioneer Accused Products do not have substantial non-infringing uses.

2 79. Defendants SEA and SEC make or have made, use, used, offer to sell, sell,
3 distribute, supply, provide, and/or import into the United States products that include Blu-ray
4 drives, including but not limited to home theater system models HT-BD8200, Blu-ray disc player
5 models BD-C8000, BD-C7500, BD-C6900, BD-C6800, BD-C6500, BD-C5900 and BD-C5500,
6 computer models R540-11, R480, and R580, and Blu-ray disc drive models SH-B123L, SH-
7 B123A, SH-083L and SH-083A (collectively, "the Samsung Accused Products"). SEA and SEC
8 directly infringe the '560 patent by, among other activities, operating the Blu-ray drive in the
9 Samsung Accused Products. SEA and SEC are also indirectly liable for the direct infringement
10 of the '560 patent by others. Consumers and other users of the Blu-ray drive in the Samsung
11 Accused Products directly infringe the '560 patent when they operate the Blu-ray drive in the
12 Samsung Accused Products for personal use or otherwise. SEA and SEC induce such end-users'
13 direct infringement because SEA and SEC, with knowledge of the '560 patent, knowingly and
14 intentionally encourage end-users to operate the Blu-ray drives in the Samsung Accused Products
15 by, among other means, providing instructions for use of the Samsung Accused Products,
16 providing technical support to such end users, and advertising the Samsung Accused Products for
17 use in an infringing manner. SEA and SEC contribute to end-users' infringement of the '560
18 patent by offering for sale, selling, importing into the United States, distributing, supplying,
19 and/or otherwise providing the Samsung Accused Products for use by end-users with knowledge
20 that the Blu-ray drives in the Samsung Accused Products are designed for use in a manner that
21 practices the inventions claimed in the '560 patent, and that the Blu-ray drives in the Samsung
22 Accused Products do not have substantial non-infringing uses.

23 80. Defendants Sharp and Sharp Electronics make or have made, use, used, offer to
24 sell, sell, distribute, supply, provide, and/or import into the United States products that include
25 Blu-ray drives, including but not limited to Blu-ray disc player models BD-HP24U and BD-
26 HP70U, and Blu-ray disc home theater system models BD-MPC41U (collectively, "the Sharp
27 Accused Products"). Sharp and Sharp Electronics directly infringe the '560 patent by, among
28 other activities, operating the Blu-ray drive in the Sharp Accused Products. Sharp and Sharp

1 Electronics are also indirectly liable for the direct infringement of the '560 patent by others.
2 Consumers and other users of the Blu-ray drive in the Sharp Accused Products directly infringe
3 the '560 patent when they operate the Blu-ray drive in the Sharp Accused Products for personal
4 use or otherwise. Sharp and Sharp Electronics induce such end-users' direct infringement
5 because Sharp and Sharp Electronics, with knowledge of the '560 patent, knowingly and
6 intentionally encourage end-users to operate the Blu-ray drives in the Sharp Accused Products by,
7 among other means, providing instructions for use of the Sharp Accused Products, providing
8 technical support to such end users, and advertising the Sharp Accused Products for use in an
9 infringing manner. Sharp and Sharp Electronics contribute to end-users' infringement of the '560
10 patent by offering for sale, selling, importing into the United States, distributing, supplying,
11 and/or otherwise providing the Sharp Accused Products for use by end-users with knowledge that
12 the Blu-ray drives in the Sharp Accused Products are designed for use in a manner that practices
13 the inventions claimed in the '560 patent, and that the Blu-ray drives in the Sharp Accused
14 Products do not have substantial non-infringing uses.

15 81. Defendants Toshiba, TAIS and Toshiba America make or have made, use, used,
16 offer to sell, sell, distribute, supply, provide, and/or import into the United States products that
17 include Blu-ray drives, including but not limited to Blu-ray disc player models BDX2700,
18 BDX2500, BDX2000 and BDX3000 (collectively, "the Toshiba Accused Products"). Toshiba,
19 TAIS and Toshiba America directly infringe the '560 patent by, among other activities, operating
20 the Blu-ray drive in the Toshiba Accused Products. Toshiba, TAIS and Toshiba America are also
21 indirectly liable for the direct infringement of the '560 patent by others. Consumers and other
22 users of the Blu-ray drive in the Toshiba Accused Products directly infringe the '560 patent when
23 they operate the Blu-ray drive in the Toshiba Accused Products for personal use or otherwise.
24 Toshiba, TAIS and Toshiba America induce such end-users' direct infringement because Toshiba,
25 TAIS and Toshiba America, with knowledge of the '560 patent, knowingly and intentionally
26 encourage end-users to operate the Blu-ray drives in the Toshiba Accused Products by, among
27 other means, providing instructions for use of the Toshiba Accused Products, providing technical
28 support to such end users, and advertising the Toshiba Accused Products for use in an infringing

1 manner. Toshiba, TAIS and Toshiba America contribute to end-users' infringement of the '560
2 patent by offering for sale, selling, importing into the United States, distributing, supplying,
3 and/or otherwise providing the Toshiba Accused Products for use by end-users with knowledge
4 that the Blu-ray drives in the Toshiba Accused Products are designed for use in a manner that
5 practices the inventions claimed in the '560 patent, and that the Blu-ray drives in the Toshiba
6 Accused Products do not have substantial non-infringing uses.

7 82. Defendants ViewSonic and ViewSonic International make or have made, use,
8 offer to sell, sell, distribute, supply, provide and/or import into the United States products that
9 include Blu-ray drives, including but not limited to Blu-ray player model VOT550 (collectively,
10 "the ViewSonic Accused Products"). ViewSonic and ViewSonic International directly infringe
11 the '560 patent by, among other activities, operating the Blu-ray drive in the ViewSonic Accused
12 Products. ViewSonic and ViewSonic International are also indirectly liable for the direct
13 infringement of the '560 patent by others. Consumers and other users of the Blu-ray drive in the
14 ViewSonic Accused Products directly infringe the '560 patent when they operate the Blu-ray
15 drive in the ViewSonic Accused Products for personal use or otherwise. ViewSonic and
16 ViewSonic International induce such end-users' direct infringement because ViewSonic and
17 ViewSonic International, with knowledge of the '560 patent, knowingly and intentionally
18 encourage end-users to operate the Blu-ray drives in the ViewSonic Accused Products by, among
19 other means, providing instructions for use of the ViewSonic Accused Products, providing
20 technical support to such end users, and advertising the ViewSonic Accused Products for use in
21 an infringing manner. ViewSonic and ViewSonic International contribute to end-users'
22 infringement of the '560 patent by offering for sale, selling, importing into the United States,
23 distributing, supplying, and/or otherwise providing the ViewSonic Accused Products for use by
24 end-users with knowledge that the Blu-ray drives in the ViewSonic Accused Products are
25 designed for use in a manner that practices the inventions claimed in the '560 patent, and that the
26 Blu-ray drives in the ViewSonic Accused Products do not have substantial non-infringing uses.

27 83. Defendant Vizio makes or has made, uses, offers to sell, sells, distributes, supplies,
28 provides and/or imports into the United States products that include Blu-ray drives, including but

1 not limited to Blu-ray player models VBR231, VBR122 and VBR133 (collectively, “the Vizio
2 Accused Products”). Vizio directly infringes the ’560 patent by, among other activities, operating
3 the Blu-ray drive in the Vizio Accused Products. Vizio is also indirectly liable for the direct
4 infringement of the ’560 patent by others. Consumers and other users of the Blu-ray drive in the
5 Vizio Accused Products directly infringe the ’560 patent when they operate the Blu-ray drive in
6 the Vizio Accused Products for personal use or otherwise. Vizio induces such end-users’ direct
7 infringement because Vizio, with knowledge of the ’560 patent, knowingly and intentionally
8 encourages end-users to operate the Blu-ray drives in the Vizio Accused Products by, among
9 other means, providing instructions for use of the Vizio Accused Products, providing technical
10 support to such end users, and advertising the Vizio Accused Products for use in an infringing
11 manner. Vizio contributes to end-users’ infringement of the ’560 patent by offering for sale,
12 selling, importing into the United States, distributing, supplying, and/or otherwise providing the
13 Vizio Accused Products for use by end-users with knowledge that the Blu-ray drives in the Vizio
14 Accused Products are designed for use in a manner that practices the inventions claimed in the
15 ’560 patent, and that the Blu-ray drives in the Vizio Accused Products do not have substantial
16 non-infringing uses.

17 84. Defendants Yamaha, Yamaha America, and Yamaha USA make or have made,
18 use, offer to sell, sell, distribute, supply, provide and/or import into the United States products
19 that include Blu-ray drives, including but not limited to Blu-ray players such as models BD-
20 A1000, BD-S667, BD-S1900, BD-S1065 (collectively, “the Yamaha Accused Products”).
21 Yamaha, Yamaha America, and Yamaha USA directly infringe the ’560 patent by, among other
22 activities, operating the Blu-ray drive in the Yamaha Accused Products. Yamaha, Yamaha
23 America, and Yamaha USA are also indirectly liable for the direct infringement of the ’560 patent
24 by others. Consumers and other users of the Blu-ray drive in the Yamaha Accused Products
25 directly infringe the ’560 patent when they operate the Blu-ray drive in the Yamaha Accused
26 Products for personal use or otherwise. Yamaha, Yamaha America, and Yamaha USA induce
27 such end-users’ direct infringement because Yamaha, Yamaha America, and Yamaha USA, with
28 knowledge of the ’560 patent, knowingly and intentionally encourage end-users to operate the

1 Blu-ray drives in the Yamaha Accused Products by, among other means, providing instructions
2 for use of the Yamaha Accused Products, providing technical support to such end users, and
3 advertising the Yamaha Accused Products for use in an infringing manner. Yamaha, Yamaha
4 America, and Yamaha USA contribute to end-users' infringement of the '560 patent by offering
5 for sale, selling, importing into the United States, distributing, supplying, and/or otherwise
6 providing the Yamaha Accused Products for use by end-users with knowledge that the Blu-ray
7 drives in the Yamaha Accused Products are designed for use in a manner that practices the
8 inventions claimed in the '560 patent, and that the Blu-ray drives in the Yamaha Accused
9 Products do not have substantial non-infringing uses.

10 85. Defendants' infringement of the '560 patent has harmed Orinda, entitling Orinda
11 to recover from the Defendants the damages Orinda has sustained as a result of Defendants'
12 wrongful acts. Defendants' infringement of the '560 patent will continue to damage Orinda and
13 will cause irreparable harm to Orinda for which there is no adequate remedy at law unless
14 enjoined by this Court.

15 PRAYER FOR RELIEF

16 Orinda prays for relief as follows:

- 17 1. Judgment that each defendant has infringed the '560 patent as alleged herein,
18 directly and/or indirectly through inducement of infringement or contributory infringement;
- 19 2. A judgment and order requiring each defendant to pay Orinda compensatory
20 damages in an amount according to proof but in no event less than a reasonable royalty;
- 21 3. A judgment and order that each defendant, its agents, employees, representatives,
22 successors and assigns, and those acting in privity or in concert with them, be permanently
23 enjoined from further infringing the '560 patent. In the alternative, a judgment and order that
24 each defendant pay Orinda an on-going royalty for future acts of infringement, at a rate
25 determined by the jury or the Court;

APPARATUS AND METHOD FOR RECORDING/REPRODUCING OPTICAL INFORMATION AND OPTICAL DISK-SHAPED RECORDING MEDIUM

BACKGROUND OF THE INVENTION

1. Field of the Invention

The present invention relates in general to the recording/reproduction of optical information, and more particularly to an optical disk-shaped recording medium in which tracks constitute blocks in the unit of a predetermined number, each of the blocks being provided with a data region and a first mapping region, a second mapping region being further provided on one of the blocks having a center one of the tracks, each of the first mapping regions including mapping sectors and replacement sectors, the second mapping region including a mapping information recording region and a replacement sector region for the first mapping regions of the whole of the blocks, and an apparatus and a method for recording/reproducing optical information using the optical disk-shaped recording medium in which bad sectors of the entire tracks can efficiently be handled.

2. Description of the Prior Art

Generally, in recording media such as optical disks, the recording/reproduction of optical information is performed by applying a laser beam condensed in the order of 1 μ m to the optical disks. At this time, various errors may be generated due to dust or alien substances on the surfaces of the optical disks and defects thereon. In the optical disk having a so-called track/sector construction, data is encoded and reproduced in the unit of sector for error detection and correction. Conventionally, since error detection/correction codes are in the unit of sector of 512 KByte, they cannot be applied to a disk having a considerable interleave length such as, for example, a compact disk (CD) not employing the sector construction. Also, in the case where burst errors affecting the entire sectors are generated, they cannot be corrected, resulting in abnormal reproduction of the data, differently from random errors occurring at a part of the sectors.

As one of methods for solving the above problem, there is known a replacement method for the optical disk of the recording type in which bad sectors are detected by a reading discrimination operation of reproducing the recorded data, just after the recording to discriminate whether the recorded data is accurately reproduced, and information on the detected bad sectors are recorded on replacement sectors which are formed on particular regions of the optical disk. However, the above-mentioned replacement method has a disadvantage in that the management of the replacement sectors is complex and difficult since the defects on the optical disk of the recording type are increased due to the natural life of the disk and the number of recording times, resulting in an increase in the replacement time.

Also, the optical disk of the reproduction-only type cannot employ the reading discrimination operation since it is stamped in large quantities in a manufacturing plant. As a result, all of the manufactured disks must be read again to search for bad ones among the disks. Reading all the manufactured disks results in an increase in the manufacturing cost.

In a conventional apparatus for recording/reproducing optical information using such an optical disk, in the

2

case where data is repeatedly recorded on the same sector of the optical disk, a bad sector detection circuit detects an error in a sector address to a sector identifier and recognizes a sector of the detected error as a bad sector. In this case, data recorded on a data region cannot be detected ahead of the sector address to the sector identifier. For this reason, data may be recorded on the bad sector. This degrades the reliability.

FIG. 1 is a diagrammatic view illustrating a recording format of a conventional optical disk-shaped recording medium which is shown in U.S. Pat. No. 4,925,717. As shown in this drawing, the conventional optical disk-shaped recording medium comprises tracks, each of which includes a predetermined number of sectors SC (for example, 32 sectors). Each of the sectors SC is partitioned into a predetermined number of blocks BL1-BL_n (for example, 42 blocks), each of which is provided with a control recording region (referred to hereinafter as ARC) and an information writing region (referred to hereinafter as ARD). The ARC is provided with a servo region (referred to hereinafter as ARS) and a traverse region (referred to hereinafter as ART). The ARS is provided with a pair of tracking information pits (referred to hereinafter as QA and QC) and a clock information pit (referred to hereinafter as QB). The ART is provided with a pair of traverse information pits (referred to hereinafter as QD and QE) every 16 consecutive tracks. The use of the QD and QE makes the counting of traverses more accurate and, thus, the tracking more accurate.

In other words, the QD and QE are provided on the ART at an interval from each other of a distance P. The QD is shifted at an interval of 4 consecutive tracks, whereas the QE is shifted for each track. The traverse counting is performed in the unit of track by the QD and QE. Therefore, data regarding the number and direction of track jumps can be obtained based on the QD and QE and the tracking can thus be performed more accurately on the basis of the obtained data.

However, the above-mentioned U.S. Patent is desirable to make the tracking more accurate by performing the traverse counting at an interval of one track, but has the disadvantage that it cannot propose how to skip a bad sector resulting from an error of the disk and record information on the bad sector on a different region.

SUMMARY OF THE INVENTION

Therefore, the present invention has been made in view of the above problems, and it is an object of the present invention to provide an optical disk-shaped recording medium in which tracks constitute blocks in the unit of a predetermined number, each of the blocks being provided with a data region and a first mapping region, a second mapping region being further provided on a center one of the entire tracks, each of the first mapping regions including three mapping sectors provided at the head of the last track of each of the blocks and the subsequent replacement sectors provided on the same track, the second mapping region including a mapping information recording region and a replacement sector region for the first mapping regions of the whole of the blocks, and an apparatus and a method for recording/reproducing optical information using the optical disk-shaped recording medium in which bad sectors of the entire tracks can efficiently be handled.

In accordance with one aspect of the present invention, there is provided an optical disk-shaped recording

5,438,560

3

medium comprising a plurality of tracks, said tracks constituting blocks in the unit of a predetermined number, each of said blocks being provided with a data region and a first mapping region, a second mapping region being further provided on a center one of the entire tracks, each of said first mapping regions including mapping sectors and replacement sectors, said second mapping region including a mapping information recording region and a replacement sector region for said first mapping regions of the whole of said blocks, said mapping sectors of each of said first mapping regions recording mapping information about bad sectors of the corresponding block thereon, said replacement sectors of each of said first mapping regions being replaced for the bad sectors of the corresponding block.

In accordance with another aspect of the present invention, there is provided an apparatus for recording/reproducing optical information using an optical disk, comprising main processing means for controlling the entire operation of a system; system processing means for transferring a plurality of control signals from said main processing means to the associated components and controlling the associated components under the control of said main processing means; storage means for storing data from said system processing means; error detection/correction means for detecting an error of the data stored in said storing means and correcting the detected error; sector read/write control means for reading and writing a target sector address of the error detected by said error detection/correction means; disk control means for controlling the optical disk in response to the target sector address read from said sector read/write control means; mapping memory means for storing mapping sector information from said system processing means; modulating/demodulating means for modulating the data from said storage means and writing demodulated data into said storage means; control logic means for outputting a control signal in response to an output of said modulating/demodulating means; drive control means for driving the optical disk in response to the control signal from said control logic means; and drive interfacing means for transferring the control signal from said control logic means to said drive control means.

In accordance with a further aspect of the present invention, there is provided a method of recording optical information using an optical disk, comprising the steps of checking whether a target sector of the optical disk on which data is to be recorded is a bad sector, upon receiving a data recording command from main processing means; storing information into storage means in accordance with the checked result; reading information from mapping sectors of a block of the optical disk to which said target sector belongs and storing the read information into mapping memory means; receiving the data to be recorded from said main processing means and checking an error of the received data; checking whether said target sector is the bad sector; allotting a replacement sector of the optical disk to said target sector if it is checked that said target sector is the bad sector and updating the mapping sector information in said mapping memory means; seeking said target sector if it is checked that said target sector is normal and setting the recording command in sector read/write control means so that the data can be recorded on said target sector; and modulating the data and recording the modulated data on said target sector.

4

In accordance with yet another aspect of the present invention, there is provided a method of reproducing optical information using an optical disk, comprising the steps of checking whether a target sector of the optical disk from which data is to be reproduced is a bad sector, upon receiving a data reproduction command from main processing means; storing information into storage means in accordance with the checked result; reading information from mapping sectors of a block of the optical disk to which said target sector belongs and storing the read information into mapping memory means; checking whether said target sector is the bad sector; reading a replacement sector of the corresponding block if it is checked that said target sector is the bad sector; seeking said target sector if it is checked that said target sector is normal and setting the reproduction command in sector read/write control means so that the data can be reproduced from said target sector; moving an optical head to said target sector; demodulating the data read by said optical head; correcting an error of the demodulated data and storing the error-corrected data into said storage means; and sending the error-corrected data stored in said storage means to said main processing means through system processing means.

BRIEF DESCRIPTION OF THE DRAWINGS

The above and other objects, features and advantages of the present invention will be more clearly understood from the following detailed description taken in conjunction with the accompanying drawings, in which:

FIG. 1 is a diagrammatic view illustrating a recording format of a conventional optical disk-shaped recording medium;

FIG. 2 is a diagrammatic view illustrating a construction of a general optical disk;

FIG. 3 is a block diagram of an apparatus for recording/reproducing optical information in accordance with the present invention;

FIG. 4 is a diagrammatic view illustrating data and mapping regions of an optical disk in accordance with the present invention;

FIG. 5 is a diagrammatic view illustrating a format of each block in FIG. 4;

FIG. 6 is a diagrammatic view illustrating a format of a second mapping region in FIG. 4;

FIG. 7 is a flowchart illustrating a method of recording the optical information in accordance with the present invention; and

FIG. 8 is a flowchart illustrating a method of reproducing the optical information in accordance with the present invention.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

Referring to FIG. 3, there is shown a block diagram of an apparatus for recording/reproducing optical information in accordance with the present invention. As shown in this drawing, the recording/reproducing apparatus of the present invention comprises a host central processing unit (CPU) 1 as a main processor for controlling the entire operation of the system, a system interface/system CPU 2 for transferring a plurality of control signals from the main processor 1 to the associated components and controlling the associated components under the control of the main processor 1, and a RAM 3 for storing data from the system interface/system CPU 2.

5,438,560

5

An error detection/correction circuit 4 is provided in the recording/reproducing apparatus to detect an error of the data stored in the RAM 3 and correct the detected error.

A sector read/write control circuit 5 is also provided in the recording/reproducing apparatus to read and write a target sector address of the error detected by the error detection/correction circuit 4.

A disk controller 6 is also provided in the recording/reproducing apparatus to control an optical disk 12 in response to the target sector address read from the sector read/write control circuit 5.

The recording/reproducing apparatus also comprises a mapping memory 7 for storing mapping sector information from the system interface/system CPU 2, a modulating/demodulating circuit 8 for modulating the data from the RAM 3 and writing demodulated data into the RAM 3, a control logic circuit 9 for outputting a control signal in response to an output of the modulating/demodulating circuit 8, a drive control circuit 11 for driving the optical disk 12 in response to the control signal from the control logic circuit 9, and a drive interface 10 for transferring the control signal from the control logic circuit 9 to the drive control circuit 11.

The operation of the recording/reproducing apparatus with the above-mentioned construction in accordance with the present invention will hereinafter be described in detail.

First, for the purpose of efficiently managing and handling bad sectors in recording or reproducing data on/from the optical disk, tracks of the optical disk as shown in FIG. 2 constitutes blocks in the unit of a predetermined number (for example, 100 tracks/1 block) as shown in FIG. 4. In FIG. 5, the tracks are numbered beginning with 1, whereas 0 in FIG. 4.

In FIG. 4, each block (100 tracks) is provided with a user data track region 13 including 99 tracks (No. 0-98) and a first mapping region 14 including the remaining one track (No. 99). A second mapping region 15 is further provided on a center one of the entire tracks. Namely, if the total number of the tracks is, for example, 10,000, the second mapping region 15 is provided on the track numbered with 5,000. The second mapping region 15 includes a mapping information recording region and a replacement sector region for the 100 first mapping regions 14 of the whole of the blocks. In this connection, the second mapping region 15 is used for the management and replacement of the bad sectors of the entire tracks.

As shown in FIG. 5, each of the first mapping regions 14 includes three mapping sectors M1-M3 provided at the head of the last track of each of the blocks and the subsequent replacement sectors R1-Rn provided on the same track. In FIG. 6, the replacement sector region of the second mapping region 15 is used when the replacement sectors R1-Rn of each of the first mapping regions 14 are insufficient or when a defect is present on the mapping information recording region of the second mapping region 15. It should be noted that, the number of tracks per block may be such a value that an optical head can scan at a high speed or a value within the optimal operable range of the optical head.

The blocks #1-#N are formatted on the optical disk in the above manner before data is accessed by a drive system. Test data is recorded on the formatted blocks #1-#N. The test data is then reproduced from the blocks #1-#N. In this manner, it is discriminated whether an error is present in the sector address or a

6

defect is present in the data region. If it is discriminated that the error is present in the sector address, the same mapping information on the corresponding bad sector is recorded on the mapping sectors M1-M3 of the first mapping region 14 of the corresponding block as shown in FIG. 5. Also, the replacement sectors R1-Rn of the first mapping region 14 are used when the mapping sectors M1-M3 of the same first mapping region 14 are bad sectors.

For example, provided that the mapping sector M1 of the first mapping region 14 is bad, the information on the mapping sector M2 thereof is read by the drive system. Similarly, if the mapping sector M2 of the first mapping region 14 is bad, the information on the mapping sector M3 thereof is read by the drive system. Also, as shown in FIG. 6, the second mapping region 15 is provided on the center one (No. 4999) of the entire tracks and includes the mapping information recording region and the replacement sector region for the 100 first mapping regions 14 of the whole of the blocks. All information regarding the first and second mapping regions 14 and 15 are stored in the mapping memory 7. Therefore, actual data is recorded on the optical disk 12 after confirmation of presence of a defect on the corresponding recording region depending on the information in the mapping memory 7. On the other hand, provided that the mapping sector SM1 of the second mapping region 15 is bad, the information on the mapping sector SM2 thereof is read by the drive system. Similarly, if the mapping sector SM2 of the second mapping region 15 is bad, the information on the mapping sector SM3 thereof is read by the drive system.

As mentioned above, the blocks #1-#N are formatted on the optical disk 12 at an interval of 100 tracks. Under this condition, the optical information recording/reproducing apparatus discriminates the presence of the errors in the sector address and data and the defect on the recording region by recording and reproducing the test data on/from the sectors of the blocks. In accordance with the discriminated result, the recording/reproducing apparatus records the information on the bad sectors on the mapping sectors M1-M3 of the first mapping region 14.

The sector address error signifies a self-error in the sector on which the data is to be recorded. The sector error address is read or written as the target sector address by the sector read/write control circuit 5. The control logic circuit 9 detects the sector error address in response to the output signal from the sector read/write control circuit 5.

The data error in the data region is detected as an error detection/correction code by the error detection/correction circuit 4. Recorded on the mapping sectors are addresses of the bad sectors and addresses of the replacement sectors for the bad sectors. Also, states of the replacement sectors are recorded on the mapping sectors.

Referring to FIG. 7, there is shown a flowchart illustrating a method of recording the optical information in accordance with the present invention. First, the main processor 1 generates a recording command to the system interface/system CPU 2 at the step A1. In response to the recording command from the main processor 1, the system interface/system CPU 2 outputs a device command block to the disk controller 6. Upon receiving the device command block, the disk controller 6 instructs the drive control circuit 11 to scan a track of a block to which the target sector belongs. It is checked

5,438,560

7

at the step A2 whether the target track/sector (referred to hereinafter as the target sector) is a bad sector. Information is stored in the RAM 3 in accordance with the checked result.

If the target sector has been scanned, the system CPU 2 reads the information from the mapping sector M1 and stores the read information into the mapping memory 7 at the step A3. At this time, the system CPU 2 reads the information from the mapping sector M2 if the mapping sector M1 is bad and, going one step forward, reads the information from the mapping sector M3 if the mapping sector M2 is bad, and then stores the read information into the mapping memory 7.

The system CPU 2 receives data to be recorded on the optical disk from the main processor 1 and stores the received data into the RAM 3 at the step A4. The error detection/correction circuit 4 checks at the step A5 whether correct data from the main processor 1 is sent to the RAM 3. Here, the error detection/correction circuit 4 does not perform the function of detecting and correcting the error of the data, but checks using a parity bit whether correct data from the main processor 1 is sent to the RAM 3.

Then, it is checked at the step A8 whether the target sector is the bad sector. If it is checked at the step A8 that the target sector is the bad sector, a replacement sector address is detected from the mapping information in the mapping memory 7 to allot the corresponding replacement sector to the target sector at the step AT. The allotted replacement sector is changed into the target sector. The information regarding the bad sector and the replacement sector is updated and the updated information is stored in the RAM 7.

In the case where all of the replacement sectors of the corresponding block have been used, one of the sectors of the replacement sector region not used is allotted to the replacement sector. The information regarding the mapping sectors M1-M3 in the mapping memory 7 is updated on the basis of the allotted replacement sector.

If it is checked at the step A6 that the target sector is normal or after performing the step A7, the disk controller 6 instructs the drive control circuit 11 to seek the track of the block to which the target sector belongs, at the step A8. Also, the disk controller 6 sets the recording command in the sector read/write control circuit 5 so that the data can be recorded on the target sector.

The modulating/demodulating circuit 8 modulates the data from the RAM 8 and outputs the modulated data to the drive control circuit 11 so that the data can be recorded on the target sector of the optical disk 12 at the step A9.

Referring to FIG. 8, there is shown a flowchart illustrating a method of reproducing the optical information in accordance with the present invention. First, the main processor 1 generates a reproduction (read) command to the system interface/system CPU 2 at the step B1. In response to the reproduction command from the main processor 1, the system interface/system CPU 2 outputs a device command block to the disk controller 6. Upon receiving the device command block, the disk controller 6 instructs the drive control circuit to scan the first mapping region 14 of a block to which the target sector from which the data is to be read belongs. It is checked at the step B2 whether the target sector is a bad sector. Information is stored in the RAM 3 in accordance with the checked result.

If the target sector has been scanned, the system CPU 2 reads the information from the mapping sector M1

8

and stores the read information into the mapping memory 7 at the step B3. At this time, the system CPU 2 reads the information from the mapping sector M2 if the mapping sector M1 is bad and, going one step forward, reads the information from the mapping sector M3 if the mapping sector M2 is bad, and then stores the read information into the mapping memory 7. Also, if the first mapping region 14 is bad or the replacement sector to be used is not present in the first mapping region 14, the system CPU 2 scans the second mapping region 15.

It is checked at the step B4 whether the target sector is the bad sector. If it is checked at the step B4 that the target sector is the bad sector, a replacement sector address is detected from the mapping information in the mapping memory 7 to read a replacement sector of the corresponding block at the step B8.

If it is checked at the step B4 that the target sector is normal, the disk controller 6 instructs the drive control circuit 11 to seek the track of the block to which the target sector belongs, at the step B6. Also, the disk controller 6 sets the read command in the sector read/write control circuit 5 so that the data can be read from the target sector. An optical head (not shown) is moved to the target sector at the step B7.

After performing the step B7, the data read by the optical head is applied to the modulating/demodulating circuit 8 through the drive control circuit 11 and the control logic circuit 9. The modulating/demodulating circuit 8 demodulates the data from the optical head and outputs the demodulated data to the RAM 3 at the step B8.

The error detection/correction circuit 4 detects the error of the data stored in the RAM 3 and corrects the detected error at the step B9. The error to be corrected is a random error or a burst error which may take place on the disk or due to any other causes when the data is read from the disk.

The error-corrected data from the error detection/correction circuit 4 is again stored in the RAM 3. The error-corrected data from the RAM 3 is sent to the main processor 1 through the system interface/system CPU 2 at the step B10. In this manner, the reproduction of the data recorded on the optical disk 12 is performed.

As apparent from the above description, according to the present invention, the bad sectors can efficiently be handled although they are generated in large quantities or in use of the optical disk. Therefore, the data, can reliably be recorded or reproduced and the manufacturing cost can be reduced.

Although the preferred embodiments of the present invention have been disclosed for illustrative purposes, those skilled in the art will appreciate that various modifications, additions and substitutions are possible, without departing from the scope and spirit of the invention as disclosed in the accompanying claims.

What is claimed is:

1. A method of recording optical information using an optical disk, comprising the steps of:
 - checking whether a target sector of the optical disk on which data is to be recorded is a bad sector, upon receiving a data recording command from main processing means;
 - storing information into storage means in accordance with the checked result;
 - reading information from mapping sectors of a block of the optical disk to which said target sector belongs and storing the read information into mapping memory means;

5,438,560

9

receiving the data to be recorded from said main processing means and checking for an error in the received data;
 checking whether said target sector is the bad sector; allotting a replacement sector located in a center of the optical disk to the target sector if it is detected that said target sector is the bad sector, and updating the mapping sector information in said mapping memory means;
 seeking said target sector if it is checked that said target sector is normal and setting the recording command in sector read/write control means so that the data can be recorded on said target sector; and
 modulating the data and recording the modulated data on said target sector.
 2. A method of reproducing optical information using an optical disk, comprising the steps of:
 checking whether a target sector of the optical disk from which data is to be reproduced is a bad sector, upon receiving a data reproduction command from a main processing means;
 storing information into storage means in accordance with the checked result;
 reading information from mapping sectors of a block of the optical disk to which said target sector belongs and storing the read information into mapping memory means;
 checking whether said target sector is the bad sector; reading a replacement sector in a center block of the optical disk if it is detected that the target sector is the bad sector, and updating the mapping sector information in said mapping memory means;
 seeking said target sector if it is checked that said target sector is normal and setting the reproduction command in a sector read/write control means so that the data can be reproduced from said target sector;
 moving an optical head to said target sector;
 demodulating the data read by said optical head;
 correcting an error of the demodulated data and storing the error-corrected data into said storage means; and
 sending the error-corrected data stored in said storage means to said main processing means through system processing means.

10

3. A method of recording optical information using an optical disk, comprising the steps of:
 providing an optical disk-shaped recording medium having on a surface thereof a plurality of tracks, wherein a predetermined number of said tracks constitute blocks, each of the blocks including:
 a data region,
 a first mapping region, each of which includes:
 mapping sectors, each of which includes an area for recording mapping information about bad sectors of the corresponding block thereon, and
 replacement sectors, wherein the replacement sectors of each of the first mapping regions are replaced for bad sectors of the corresponding block,
 a second mapping region located at a center one of all the tracks, which includes:
 a mapping information recording region and
 a replacement sector region for the first mapping regions of the entirety of the blocks,
 receiving a data recording command from main processing means and determining whether a target sector on which data is to be recorded is a bad sector, responsive to the data recording command;
 storing information into storage means in accordance with the bad sector determination;
 reading information from the mapping sectors to which the target sector belongs and storing the read information into mapping memory means;
 receiving from said main processing means data to be recorded and checking for an error in the received data;
 determining whether the target sector is a bad sector; allotting a replacement sector located in a center of the optical disk to the target sector if it is determined that it is a bad sector and updating the mapping sector information in the mapping memory means;
 seeking the target sector if it is determined that it is not a bad sector and setting the recording command in a sector read/write control means so that the received data can be recorded on the target sector; and
 modulating the received data and recording the modulated data on the target sector.
